

Patient Experience

Patient Medical Overview:

Patient Testimonial has full review

GammaCore Continued Treatment:

Preventive: 2 doses twice daily in morning and afternoon

Acute – has not been needed

Patient Letter:

Before using the Gamma-core I had suffered from chronic daily headache for 2 and half+ years. My consultant had tried various different medications with no success, indeed I have suffered some quite serious side effects from some of them.

When I met with Juana, I was exhausted. I hadn't slept in 18 months. I was over weight having had no inclination whatsoever to lose any of my baby weight from my last 2 pregnancies. I felt as if I was barely functioning at work.

I wasn't even sceptical about the Gamma-core – I was willing to try anything. After 3 days my headache eased, after 6 days it was gone completely. That was in April, it is now the end of August. I rarely get a headache now and if I do, it tends to be brought on by stress. When this happens I use extra doses of the Gamma-core.

I am now sleeping at night. I have lost 3 stone in weight and I have lots of energy, which is great when you have a 2 and half year old boy who has the energy of an entire football team. It was an incredible sensation not to have a headache and feel so well and motivated that one morning I woke up and decided that today was the day I was going to start losing weight. And I did it by myself – I didn't join a fancy gym or a club, I just stopped eating rubbish and started taking care of myself.

The effect using the Gamma-core on my headache has been fantastic but the knock-on effect on our family life has been just as incredible. Because I have more energy I feel better. I am happier. Everyone at home is happy.

Chronic daily headache affected all of us and the Gamma-core has helped all us. I also delighted not to have to take medication. This device has changed my life for the better and I very grateful to the company who sponsored it to Juana for choosing me for the trial.
